INDIVIDUAL CUSTOMARY CHARGE DISTRIBUTION  
POLICY SIMULATIONS

PROFILE AREA: ALL NORTHERN CALIFORNIA

YEAR: 1975

These tables were developed for the Health Care Financing Administration of the Department of Health, Education, and Welfare under Contract No. 600-75-0054.

## Introduction

The policy simulation tables present statistics on the effects of three potential alterations of method of determining reasonable charges under Medicare on program costs and beneficiary liabilities. The statistics are based on the assumption that the number of services and the amount billed for each service did not change.

The reimbursement options considered are:

1. Setting the reasonable charge equal to the area prevailing for all physicians;
2. Adding a \$1 per service bonus to the reasonable; and
3. Increasing the reasonable charge by 2 percent.

Patient liability is assumed to be 20 percent of the new reasonable amounts on assigned services and the difference between the billed amount and 80 percent of the new reasonable amount on non-assigned services. An alternative would be for the program to pay 100 percent of the change in the reasonable amount. To obtain change in program cost under this alternative, multiply the amount in the tables by 1.25. Change in patient liability on assigned services would be zero under this alternative and would equal the negative of program costs for non-assigned services.

The values in the tables were calculated from Medicare claims submitted by a sample of 1,456 Californian physicians in three specialties--general practice, general surgery, and internal medicine. The sample physicians were located in the northern portion of the state and were all solo practitioners between 1972 and 1975. A detailed description of the sample design is contained in Scanlon and Bluck (1977). Claims for 210 procedures as defined by the 1969

California Relative Value Study were used. A list of the procedures is in Appendix A.
